

ABSTRACT

A FLUID DISPENSING DEVICE

A fluid dispensing device having a housing and a pump action fluid discharge device. The pump action fluid discharge device is arranged to be actuated by one or more levers which are pivotally connected to part of the housing and are driveably connect by a toothed drive to a container forming part of the fluid discharge device 8. When the one or more levers are squeezed together the container is urged towards a nozzle of the fluid dispensing device causing a pump forming part of the fluid discharge device to dispense a single dose of fluid from the nozzle.
